

said pole to grip said tube to retain said shade assembly at a selected height,
said base means including a base plate,
at least three legs attached to said plate,
a terminal connector block attached to said plate on the side opposite from
said pole means,
wire means connected to said block and to said shade assembly,
said shade assembly includes a switch connected to said wire, and
a low voltage transformer remote from said fixture connected to a source of
electrical energy, and a supply wire connected to said transformer and to said connector
block to supply low voltage to said fixture.

9. A portable outdoor lighting fixture comprising;
- base means,
- hollow pole means extending vertically from said base means,
- a flexible arm connected to said pole means,
- a shade assembly connected to said arm,
- said shade assembly including a low voltage bulb therein,
- said pole means includes a hollow pole connected to said plate,
- a tube in telescoped relation to said pole, and
- a compression nut on
- said pole to grip said tube to retain said shade assembly at a
- selected height,
- said base means including a base plate,
- at least three legs attached to said plate,
- a terminal connector block attached to said plate on the side
- opposite from said pole means,
- wire means connected to said block and to said shade
- assembly,
- said shade assembly includes a switch connected to said wire, and
- a low voltage transformer remote from said fixture connected to a
- source of electrical energy, and a supply wire connected to

said transformer and to said connector block to supply low voltage to said fixture.

3. A lighting fixture as defined in claim 9 in which, said plate has a spike connected thereto to stick in the ground to provide support to said fixture.
4. A lighting fixture as defined in Claim 9 in which, said terminal block has a plug connected to said low voltage supply wire and engaged in said block.
5. A lighting fixture as defined in claim 9 in which, said wire means and said supply wire are engaged in said block.
6. A lighting fixture as defined in Claim 9 in which, said wire means and said supply wire are connected together in said block by wire nuts.
